Founding Support Engineer — Customer Operations → Production AI Systems

Sole support, onboarding, education and demos for a B2B SaaS — then the production AI agent that handles most of it. I still work the queue every morning.

SUMMARY

For fourteen months I have been the entire customer-facing function at a B2B data SaaS: support, onboarding, customer education, live demos and the product-feedback loop into engineering, alone. Then I built the production AI agent that now carries most of it — knowledge base, eval harness, AWS deployment, and autonomous refunds, credits and cancellations under hard authorization ceilings. Eight years of client-facing sales sit underneath the engineering, which is why the agent's answers sound like a person and its money guardrails were written by someone who still works the queue it serves.

EXPERIENCE

Founding Support Engineer — Evaboot

Jul 2025 – Present

Remote · B2B SaaS (LinkedIn Sales Navigator data extraction) | ~6-person team | Sole customer-facing hire: support, onboarding, education, demos | SMB to Enterprise

- **Built and shipped the company's production AI support agent end to end** — knowledge base, retrieval, eval harness, AWS deployment, live audit. New users route to it by default, and it executes refunds, credits, cancellations and invoice voids autonomously under typed authorization ceilings (refund $\leq$ \$29, credit $\leq$ 200), with idempotency keys, a verified action ledger, and a weekly audit against what each customer actually asked for.
- **Cut median customer wait to 3.3 staffed hours** by retiring a two-hour human monitoring window for a 24-hour automated cycle plus a two-hourly queue digest that reports itself into team chat — the first support signal reaching a person without anyone fetching it. Drove a working inbox from 630 active threads to 120 and cleared the owed queue to zero on repeat cycles.
- **Designed the agent's entire knowledge layer from scratch**: a 15-category taxonomy over 120 articles, SQLite + FTS5 retrieval (deliberately skipping vector RAG as over-engineering at 15k words), and a rebuilt help center on Astro Starlight / Cloudflare Pages migrated off Intercom — 118 articles, 53 public, zero dead links, after recovering 134 images before their CDN links expired.
- **Gated every agent change behind a golden eval**: a 114-case regression suite scored by 50 draft and 50 judge subagents through a deterministic scorer (hard rules 100%, soft 90%); 603 tests green on the triage layer, which is barred from touching money by a test rather than a comment.
- **Recovered revenue and closed billing leaks hands-on**: built and submitted evidence on 19 disputes across 10 customers (~\$1,070 + €49) with zero failures — 21 submissions in 15 minutes once systematized — and executed verified money batches (8 refunds / \$293.97; a later run of \$425 + €9 refunded and \$99 collected) against a live reconciled ledger.
- **Found the silent failures no dashboard was reporting**: only 4 of ~296 support emails were reaching the ticketing system (a 30-day blind spot), closed-thread counts read 1 against 212 real, and published reply-time medians ran ~3x optimistic on a wrong staffed-day assumption. Archived 18,065 conversations and ~5,300 attachments to S3 ahead of a seat sunset with zero fetch failures.
- **Built the onboarding and customer-education function from nothing** — no onboarding documentation existed when I arrived. Designed the flow (three guided nodes plus pricing), wrote the material, and produced the tutorial library end to end from script to final edit: HubSpot and Clay integrations, recurring-export walkthroughs, and in-app onboarding video. Authored the tone handbook that every human and agent reply is now written against, and trained a delegate onto part of the queue.
- **Carried the commercial surface alone alongside it** — live demos through to close, including GDPR-skeptical enterprise buyers; contract execution (1M-credit deal via DocuSign); discount policy design (\$299/mo threshold, two-route logic); outbound campaigns at ~3,000 emails/week. Became engineering's product-defect channel, publishing a machine-readable triage feed so they could action signal without opening conversations — one record per defect signature rather than one per affected customer. Held all of it through every incident, including a Chrome Web Store delisting and 400–500 ticket spikes, as the only customer-facing person in the company.

SaaS Sales Executive — All Funeral Services

Jan 2025 – Jul 2025

New York, USA · DeathTech SaaS | 100+ employees | SMB to Mid-Market | Avg deal \$20K USD

- Promoted from Lead Generation to Pre-Sales in 1 month and onto the Account Management team at 5 months, on initiative and speed through the funnel.
- Made 80–100 cold calls/day, booking 5–8 demos/week; supported a first closed deal inside 30 days against a typical 6-month cycle.

Senior Team Lead — Globalfaces Direct

Mar 2024 – Dec 2024

Toronto, Canada · Nonprofit fundraising | 1,200 reps | B2C & SMB | Avg deal \$2K USD

- Promoted to Senior Team Lead within 1 month; led a door-to-door nonprofit fundraising team.
- Closed 10+ sales/week from 150+ donor presentations; trained and coached 20+ reps, lifting close rates and team consistency.

Sales Account Manager — Yutian Printing

Sep 2021 – Feb 2024

Kaohsiung, Taiwan · Commercial printing | 20 employees | B2C & SMB | Avg deal \$7K USD

- Owned full-cycle sales and rebuilt the pipeline from 0 to 7,000+ contacts through a loyalty program and omni-channel outreach.
- Rebuilt the CRM, scoped pricing, led a 4-person team, and launched market strategies that held through COVID; analyzed campaign ROI to find and fix revenue inefficiencies.

Earlier

2018 – 2021

Recruitment Consultant, PERSOLKELLY Taiwan · Taipei · Sep 2020 – Sep 2021 — full-cycle IT recruitment for enterprise clients (Ubiquiti, TP-Link, Amazon Eero); 50+ cold calls/day.

Product Demonstrator, Ajinomoto Food Europe · London, UK · Oct 2018 – Sep 2020 — 25 UK venues; drove a 20% lift in customer satisfaction and trained new hires.

TECHNICAL SKILLS

AI & Agents — Production LLM agent design, prompt engineering, tool/function calling, MCP servers, golden-set evaluation harnesses, LLM-as-judge scoring, prompt caching, knowledge-base and retrieval design, Claude, Codex, Cursor

Support & CX Platforms — Intercom (Fin AI agent, workflows, custom answers, data connectors, escalation rules), help-center architecture, CSAT and resolution instrumentation, triage and queue design

Billing & Revenue Ops — Stripe (disputes, refunds, invoices, subscriptions, idempotency), chargeback evidence automation, dispute-prevention policy, DocuSign contracts, discount policy design

Cloud & Infrastructure — AWS (EC2, S3, Lambda, SES, IAM, Secrets Manager), Cloudflare Pages, Supabase, Astro Starlight, Bubble, n8n, webhooks and REST integrations

Engineering — Python, SQL, SQLite/FTS5, React, Git/GitHub (spec → plan → review → merge), pytest, automated code-review gates, security review

Customer Education — Onboarding flow design, tutorial and walkthrough video production (script → record → edit), help-center authoring, tone and voice standards, Loom, CleanShot

Go-to-Market — Live product demos through to close, contract execution (DocuSign), discount policy design, cold outreach at scale, HubSpot, LinkedIn Sales Navigator, GDPR-sensitive enterprise conversations

EDUCATION

Bachelor of Arts (BA), Arts Management — University of London, London, UK · 2020

AWARDS

"Explaining Technology to Boomers" Award, 2025
