Conversational Design & AI Delivery — Agent Architecture, Voice & Evaluation

Designed the conversation architecture, wrote the tone system it speaks in, and built the evaluation loop that proves a change actually helped.

SUMMARY

Conversational designer and AI operator who has taken an agent from first node to production. Over fourteen months as the sole customer-facing hire at a B2B SaaS I designed the conversation architecture for Intercom Fin across three successive roles — support, onboarding and customer success — authored the tone system every reply is written against, and built the persona-based evaluation loop that tells us whether a change improved anything. Eight years of client-facing work before that, across the UK, Taiwan, Canada and a France-based team, in demos, enablement and enterprise conversations.

EXPERIENCE

Founding Support Lead — Evaboot

Jul 2025 – Present

Remote (UTC+8) · B2B SaaS, LinkedIn Sales Navigator data extraction | ~6-person team | Sole customer-facing hire | SMB to Enterprise

- **Designed the conversation architecture for a production virtual agent** — broke onboarding into three triggered nodes plus a pricing node, each with a defined entry condition, purpose and content, after scrapping a first design when the highly interactive model proved wrong for the platform. Configured Intercom Fin across three successive roles — support, onboarding, and customer success — each needing different scope, escalation behaviour and voice.
- **Authored the tone system the agent and every human reply are written against** — explicit rulings rather than style preferences: reply visibility, capacity state, apology dating, cache truth, professional register. Reviewed and rejected an external support-writing toolkit because it taught the robotic voice we ban, then traced our own bad tone to a single upstream drafting instruction and deleted it, rather than layering more rules on top.
- **Built the evaluation loop that proves a change helped** — a 114-case golden suite scored by 50 draft and 50 judge subagents through a deterministic scorer (hard rules 100%, soft 90%), plus a fifteen-persona advisory run through DeepEval against a live agent constitution. Paired it with a resolution data pool categorising every conversation as confirmed, assumed, or abandoned mid-conversation.
- **Tuned escalation logic, fallbacks and guardrails** — audited every escalation rule for effectiveness and disabled the majority ahead of a 24-hour automated cycle; rewrote the human-handoff fallback with expectation-setting language (workflow as the fastest path, a person as a longer wait for the same outcome). Median customer wait now 3.3 staffed hours; working inbox down from 630 active threads to 120.
- **Delivered enablement that made customers independent** — built the onboarding programme and tutorial library from nothing, scripted, recorded and edited: HubSpot and Clay integration walkthroughs, recurring-export videos, in-app onboarding video. Rebuilt the help center on Astro Starlight / Cloudflare Pages with a 15-category taxonomy over 120 articles, maintained as the agent's live knowledge source.
- **Ran end-to-end delivery on every project** — discovery, requirements, design, build, staged rollout, QA and post-launch optimisation, through spec and code review gates at each stage. When an auto-close rule misfired across imported threads, specced a guard with an anomaly abort and ran a controlled re-close that preserved every thread a customer had answered.
- **Held the commercial and stakeholder surface alone** — live demos through to close including GDPR-skeptical enterprise buyers, contract execution, and multilingual customer communication during incidents. Corrected a wrong founder-facing weekly report against live state, and published a machine-readable defect feed so engineering could triage without opening conversations.

SaaS Sales Executive — All Funeral Services

Jan 2025 – Jul 2025

New York, USA · DeathTech SaaS | 100+ employees | Avg deal \$20K

- Promoted Lead Gen → Pre-Sales in 1 month and onto Account Management at 5; ran discovery and product demos for SMB and mid-market buyers.

Senior Team Lead — Globalfaces Direct

Mar 2024 – Dec 2024

Toronto, Canada · Nonprofit fundraising | 1,200 reps

- Promoted to Senior Team Lead within 1 month; trained and coached 20+ reps on script, objection handling and delivery consistency.

Earlier

2018 – 2024

Sales Account Manager, Yutian Printing · Kaohsiung, Taiwan · Sep 2021 – Feb 2024 — full-cycle sales and account management; rebuilt the pipeline from 0 to 7,000+ contacts; led a 4-person team.

Recruitment Consultant, PERSOLKELLY Taiwan · Sep 2020 – Sep 2021 — enterprise clients: Ubiquiti, TP-Link, Amazon Eero.

Product Demonstrator, Ajinomoto Food Europe · London · Oct 2018 – Sep 2020 — 25 UK venues; trained new hires on brand and client-facing delivery.

SKILLS

Conversational Design — Conversation architecture and node design, virtual agent scoping, tone and voice systems, fallback and escalation design, expectation-setting language, persona definition, multilingual customer communication

Conversational AI Platforms — Intercom Fin (workflows, custom answers, data connectors, escalation rules, guardrails), agent constitutions, prompt engineering, tool/function calling, Model Context Protocol, knowledge-base and retrieval design, Claude, Codex

Evaluation & QA — Golden-set evaluation harnesses, LLM-as-judge scoring, DeepEval persona runs, resolution-state and CSAT instrumentation, staged rollouts, dry-run verification, post-launch optimisation

Delivery — End-to-end project ownership (discovery → requirements → design → build → QA → launch), enablement programme design, tutorial and walkthrough video production (script → record → edit), help-center architecture, stakeholder management, live demos

Technical — n8n, Zapier, webhooks, REST APIs, structured JSON, Stripe, AWS (Lambda, S3, SES), Cloudflare Pages, Supabase, Git/GitHub, Notion

EDUCATION

Bachelor of Arts (BA), Arts Management — University of London, UK · 2020
