AI Support Platform & Agent — I Built the System That Replaced Our Intercom

Designed and shipped an in-house support platform and AI agent that retired Intercom and Fin, cut support handling time ~50%, and saved ~\$100K a year in tooling.

SUMMARY

I replaced our vendor helpdesk with one I designed and built. Over fourteen months as the sole customer-facing hire at a B2B SaaS, I took support from an Intercom and Fin deployment I was hired to operate, to an in-house platform I architected and shipped — customer chat widget, agent inbox, help center and email channel on AWS, fronted by an AI agent that resolves conversations and executes real money movement under hard authorization ceilings. I ran the cutover for every user, retired the Intercom seats, and built the weekly improvement loop that turns live defects into evaluation cases so the system keeps getting better without me.

EXPERIENCE

Founding Support Lead — Evaboot

Jul 2025 – Present

Remote (UTC+8) · B2B SaaS, LinkedIn Sales Navigator data extraction | ~6-person team | Sole customer-facing hire | SMB to Enterprise

- **Designed and shipped the support platform that replaced Intercom and Fin — ~\$100K/year saved in tooling.**
Architected and built the full stack on AWS: customer chat widget, agent inbox, help center, and email channel over Lambda, DynamoDB, API Gateway (HTTP + WebSocket), Cognito, S3 and SES. Ran the cutover myself — built a transcript importer with a ledger and rollback path, flipped every dashboard user over behind a feature flag, then archived 18,065 historical conversations to S3 ahead of the seat sunset with zero fetch failures.
- **Built multi-conversation chat to match what we were giving up** — per-conversation threading with user-partitioned keys, auto-reopen, hybrid state migration, file attachments and inline help-center articles, specced and reviewed before build. Brought widget, email and imported Intercom threads onto one queue so nothing fell between rails.
- **Put an AI agent in front of it that moves real money** — refunds, credits, cancellations and invoice voids executed autonomously under typed authorization ceilings (refund ≤ \$29 as a launch canary, credit ≤ 200), through a typed action tool with idempotency keys, a verified ledger, escalation paths to a human, and a weekly audit against what each customer actually asked for.
- **Built the self-improving loop** — live defects feed a weekly agent improvement cycle that turns them into golden evaluation cases, with reply mode and retrieved article IDs persisted so quality can be model-judged rather than eyeballed. Gated by a 114-case golden suite scored through a deterministic scorer (hard rules 100%, soft 90%), a fifteen-persona DeepEval run against a live agent constitution, and a resolution pool categorising every conversation as confirmed, assumed or abandoned.
- **Cut support handling time roughly in half** — retired a two-hour human monitoring window for a 24-hour automated cycle with a two-hourly queue digest that reports itself into team chat. Median customer wait now 3.3 staffed hours, after finding published medians had been running ~3x optimistic on a wrong staffed-day assumption; working inbox down from 630 active threads to 120, owed queue cleared to zero on repeat cycles.
- **Designed the conversation architecture, tone system and knowledge layer** — onboarding broken into three triggered nodes plus a pricing node; a tone handbook of explicit rulings rather than style preferences; a 15-category taxonomy over 120 articles with SQLite/FTS5 retrieval as the agent's live source; a help center rebuilt on Astro Starlight / Cloudflare Pages; and a tutorial library scripted, recorded and edited in-house.
- **Owned payments and the commercial surface alone** — Stripe disputes, chargebacks, refunds and subscriptions, including evidence on 19 disputes across 10 customers (~\$1,070 + €49) with zero failures. Wrote the deletion and erasure policy, handled GDPR and PII boundaries, confirmed every finding of an external security review plus one more, and ran demos through to close, contract execution and discount policy — through a Chrome Web Store delisting and 400–500 ticket spikes, as the only customer-facing person in the company.

SaaS Sales Executive — All Funeral Services

Jan 2025 – Jul 2025

New York, USA · DeathTech SaaS | 100+ employees | Avg deal \$20K

- Promoted Lead Gen → Pre-Sales in 1 month and onto Account Management at 5, on initiative and speed through the funnel.
- Ran discovery and product demos for SMB and mid-market buyers at 80–100 cold calls/day; supported a first close inside 30 days against a typical 6-month cycle.

Senior Team Lead — Globalfaces Direct

Mar 2024 – Dec 2024

Toronto, Canada · Nonprofit fundraising | 1,200 reps

- Promoted to Senior Team Lead within 1 month; closed 10+ sales/week from 150+ donor presentations and coached 20+ reps.

Sales Account Manager — Yutian Printing

Sep 2021 – Feb 2024

Kaohsiung, Taiwan · Commercial printing | 20 employees | Avg deal \$7K

- Owned full-cycle sales and rebuilt the pipeline from 0 to 7,000+ contacts; rebuilt the CRM, led a 4-person team, and held market strategies through COVID.

Earlier

2018 – 2021

Recruitment Consultant, PERSOLKELLY Taiwan · Taipei · Sep 2020 – Sep 2021 — full-cycle IT recruitment for enterprise clients (Ubiquiti, TP-Link, Amazon Eero).

Product Demonstrator, Ajinomoto Food Europe · London, UK · Oct 2018 – Sep 2020 — 25 UK venues; 20% lift in customer satisfaction.

SKILLS

Support Platform & Architecture — Helpdesk replacement and vendor migration, chat widget and agent inbox design, multi-conversation threading, email channel (SES), help-center architecture, transcript import with ledger and rollback, feature-flagged cutover

AI Agents & Autonomy — Production LLM agent design, typed action tools, authorization ceilings and guardrails, escalation design, idempotency and audit ledgers, tool/function calling, Model Context Protocol (MCP), prompt engineering, Claude, Codex, Cursor

Evaluation & Improvement Loops — Golden-set evaluation harnesses, LLM-as-judge scoring, DeepEval persona runs, defect-to-eval-case pipelines, resolution-state and CSAT instrumentation, staged rollouts, dry-run verification

Conversational Design — Conversation architecture and node design, tone and voice systems, fallback and escalation language, persona definition, agent constitutions, knowledge-base and retrieval design

Cloud & Automation — AWS (Lambda, DynamoDB, API Gateway HTTP/WebSocket, Cognito, S3, SES, EC2, IAM, Secrets Manager), Cloudflare Pages, Supabase, Astro, n8n, Zapier, webhooks, REST APIs, structured JSON, Git/GitHub

Payments & Regulated Ops — Stripe (disputes, chargebacks, refunds, invoices, subscriptions, idempotency), dispute prevention, GDPR erasure and PII handling, security review

Delivery & Enablement — End-to-end ownership (discovery → spec → review gates → build → QA → cutover), enablement programme design, tutorial and walkthrough video production, live demos, stakeholder management

EDUCATION

Bachelor of Arts (BA), Arts Management — University of London, London, UK · 2020
