AI Operations — Support Agent Configuration, Evaluation & Resolution Rate

Sole customer-facing hire at a B2B SaaS — configured the AI agent, built the resolution-tracking that measures it, and still work the queue every morning.

SUMMARY

Fourteen months as the entire customer-facing function at a B2B data SaaS, where I configured Intercom Fin, then built and shipped the production AI agent that now carries most of the queue — knowledge base, evaluation harness, escalation logic, and autonomous refunds and credits under hard authorization ceilings. I also built the resolution-tracking layer that measures whether the agent actually resolved anything, separating confirmed from assumed from abandoned. Eight years of client-facing work sit underneath, which is why the agent's replies sound like a person and its guardrails were written by someone who still works the queue it serves.

EXPERIENCE

Founding Support Lead — Evaboot

Jul 2025 – Present

Remote (UTC+8) · B2B SaaS, LinkedIn Sales Navigator data extraction | ~6-person team | Sole customer-facing hire | SMB to Enterprise

- **Configured and shipped the production AI support agent end to end** — knowledge base, retrieval, evaluation harness, AWS deployment, live audit. New users route to it by default. It executes refunds, credits, cancellations and invoice voids autonomously under typed ceilings (refund $\leq$ \$29 as a launch canary, credit $\leq$ 200), with idempotency keys, a verified ledger and a weekly audit against what each customer actually asked for.
- **Built the resolution-tracking layer the agent is measured on** — a data pool categorising every conversation as confirmed, assumed, or abandoned mid-conversation, fed live by auto-close and CSAT hooks with a daily backfill sweep. Paired it with reply-time instrumentation against a target window, after finding published medians had been running ~3x optimistic on a wrong staffed-day assumption.
- **Tuned escalation logic and guardrails ahead of a 24-hour automated cycle** — audited every Intercom escalation rule for effectiveness and disabled the majority, replacing a two-hour human monitoring window with automation plus a two-hourly queue digest that reports itself into team chat. Drove the working inbox from 630 active threads to 120 and cleared the owed queue to zero on repeat cycles; median wait now 3.3 staffed hours.
- **Gated every agent change behind a golden evaluation suite** — 114 regression cases scored by 50 draft and 50 judge subagents through a deterministic scorer (hard rules 100%, soft 90%). Shipped via dry-run-then-verify, staged rollout and a full E2E suite; 603 tests green on the triage layer, which is barred from touching money by a test rather than a comment. When a rule misfired across imported threads, specced a guard with an anomaly abort and ran a controlled re-close.
- **Designed the knowledge layer from scratch** — a 15-category taxonomy over 120 articles with SQLite/FTS5 retrieval (skipping vector RAG as over-engineering at 15k words), maintained as the agent's live source, plus a help center rebuilt on Astro Starlight / Cloudflare Pages and migrated off Intercom: 118 articles, zero dead links.
- **Built the integrations and automation the agent runs on** — n8n workflows and Zapier automations, two real-time webhook listeners, an LLM chain returning structured JSON, a bearer-token JSON API client, and a documented MCP server whose live tool count I settled at 37 against two internal figures that were both wrong — surfacing 20 undocumented tools that write to customers' own accounts.
- **Owned payments operations in a regulated context** — Stripe disputes, chargebacks, refunds and subscriptions: evidence on 19 disputes across 10 customers (~\$1,070 + €49) with zero failures, 21 submissions in 15 minutes once systematized. Wrote the deletion and erasure policy, handled GDPR requests and PII boundaries, and confirmed every finding of an external security review plus one more.
- **Ran onboarding, customer education and the defect channel alongside it** — built the onboarding flow and tutorial library from nothing, authored the tone handbook every human and agent reply is written against, and published a machine-readable defect feed so engineering could triage without opening conversations. Held all of it through a Chrome Web Store delisting and 400–500 ticket spikes as the only customer-facing person in the company.

SaaS Sales Executive — All Funeral Services

Jan 2025 – Jul 2025

New York, USA · DeathTech SaaS | 100+ employees | Avg deal \$20K

- Promoted Lead Gen → Pre-Sales in 1 month, onto Account Management at 5; 80–100 cold calls/day booking 5–8 demos/week.

Senior Team Lead — Globalfaces Direct

Mar 2024 – Dec 2024

Toronto, Canada · Nonprofit fundraising | 1,200 reps

- Promoted to Senior Team Lead within 1 month; closed 10+ sales/week from 150+ presentations and coached 20+ reps.

Earlier

2018 – 2024

Sales Account Manager, Yutian Printing · Kaohsiung, Taiwan · Sep 2021 – Feb 2024 — full-cycle sales; rebuilt the pipeline from 0 to 7,000+ contacts and the CRM behind it; led a 4-person team.

Recruitment Consultant, PERSOLKELLY Taiwan · Sep 2020 – Sep 2021 — full-cycle IT recruitment for Ubiquiti, TP-Link, Amazon Eero.

Product Demonstrator, Ajinomoto Food Europe · London · Oct 2018 – Sep 2020 — 25 UK venues.

SKILLS

AI Support Operations — Intercom Fin configuration (workflows, custom answers, data connectors, escalation rules, guardrails), conversation design, resolution-rate and CSAT instrumentation, triage and queue design, incident response, ticket-level root cause analysis

Agent Engineering & Evaluation — Production LLM agent design, prompt engineering, tool/function calling, Model Context Protocol (MCP), golden-set evaluation harnesses, LLM-as-judge scoring, knowledge-base and retrieval design, staged rollouts and dry-run verification, Claude, Codex, Cursor

Automation & Low-Code — n8n, Zapier, webhooks, REST APIs, structured JSON pipelines, Google Sheets and Supabase integrations, AI-assisted build workflow (spec → plan → review gates → merge), Git/GitHub, test suites as release gates

Payments & Regulated Ops — Stripe (disputes, chargebacks, refunds, invoices, subscriptions, idempotency), dispute-prevention policy, GDPR erasure and PII handling, security review, audit ledgers

Cloud — AWS (EC2, S3, Lambda, SES, IAM, Secrets Manager), Cloudflare Pages, Supabase, Bubble, Notion, Astro

EDUCATION

Bachelor of Arts (BA), Arts Management — University of London, UK · 2020
